

**Scanning tacheometers : applications of scanning technology at generating precise models of engineering objects / Cezary Toś, Bogdan Wolski, Leszek Zielina. – Kraków, 2010**

Spis treści

<b>1. Scope of research</b>	<b>5</b>
1.1. Introduction	5
1.2. Scope of research	8
<b>2. Theoretical and practical problems of laser scanning</b>	<b>10</b>
2.1. Characteristics of laser scanning technology	10
2.2. Method of measurement	12
<b>3. Scanning tacheometers</b>	<b>22</b>
3.1. Scanning total station Topcon GPT-9000A	22
3.2. Testing of scanning tacheometers accuracy	24
3.3. Test results	38
<b>4. Measurement technology and organization using a scanning tacheometer</b>	<b>40</b>
4.1. Principles behind the technology	40
4.2. Field work	43
4.3. Postprocessing of measurement results	53
4.4. Integrating scan results with digital photos at postprocessing stage	58
<b>5. Evaluation of reliability of surveys carried out by scanning technology</b>	<b>69</b>
5.1. Measures of reliability	69
5.2. Accuracy of specification of coordinates of a single cloud point	69
5.3. The accuracy of object geometric model approximated by regular surface	72
5.4. The accuracy of object numerical model	72
5.5. Testing models accuracy. MESH computer program	73
5.6. Reliability of scanning technology	82
<b>6. Study cases of using scanning tacheometers in engineering practice</b>	<b>84</b>
6.1. Program and research goals	84
6.2. Inventory and monitoring of slopes	85
6.3. Monitoring of geotechnical structures	93
6.4. Investigation of geometry, displacements and deformations of reinforced concrete structure. A study case - a sewage treatment tank	99
6.5. Inventory of water dam and reservoir	104
6.6. Monitoring progress of an open pit mine exploitation	108
6.7 Inventory of historic objects	116
<b>7. Final remarks and conclusions of research test results</b>	<b>124</b>
<b>Summary</b>	<b>127</b>
<b>Bibliography</b>	<b>131</b>
