Preface **xi**

Acknowledgments **xiii**

1. Example Problems Involving Phase Relations for Soils **1**
1.0 General Comments 1
1.1 General Definitions 1
1.2 Mass Densities 3
1.3 Unit Weights 4
1.4 Definition of Fundamental Quantities 4
1.5 Relations Derived From Fundamental Quantities 5
1.5.1 Case 1.1: Relation Between Void Ratio and Porosity 5
1.5.2 Case 1.2: Relation Between Porosity and Void Ratio 5
1.5.3 Case 1.3: Relation Between Moisture Content, Specific Gravity of Solids, Void Ratio, and Degree of Saturation 6
1.5.4 Case 1.4: Relation Between Dry Unit Weight, Specific Gravity of Solids, and Void Ratio 6
1.5.5 Case 1.5: Relation Between Moist Unit Weight, Specific Gravity of Solids, Moisture Content, and Void Ratio 7
1.5.6 Case 1.6: Relation Between Moist Unit Weight, Dry Unit Weight, and Moisture Content 7
1.5.7 Case 1.7: Relation Between Moist Unit Weight, Specific Gravity of Solids, Degree of Saturation, and Void Ratio 7
1.5.8 Case 1.8: Unit Weight of Submerged Soil and Its Relation to Moist Unit Weight 7
Example Problems 8

2. Example Problems Related to Soil Identification and Classification **51**
2.0 General Comments 51
2.1 Particle Sizes 51
2.2 Distribution of Grain Sizes 54
2.2.1 Sieve Analysis 54
2.2.2 Quantities Computed From Gradation Curves 55
2.2.3 Importance of Soil Gradation 56
2.2.4 Hydrometer Analysis 56
2.3 Plasticity of Soil 59
2.4 Atterberg Limits 61
2.4.1 Basic Definitions 61

2.4.2 Derived Limits 63
2.5 Soil Classification 65
Example Problems 67

3. Example Problems Related to Compaction of Soils 93
3.0 General Comments 93
3.1 Fundamental Definitions 93
Example Problems 97

4. Stresses, Strains, and Elastic Response of Soils 131
4.0 Introductory Comments 131
4.1 General Definitions 131
4.1.1 The Continuum Concept 131
4.1.2 Homogeneity 132
4.1.3 Isotropy 132
4.2 Concept of Stress 132
4.2.1 Definition of Stress at a Point 132
4.2.2 Definition of the State of Stress at a Point 134
4.2.3 Mean Stress 134
4.2.4 State of Plane Stress 135
4.2.5 Stress Transformations 135
4.3 Deformation and Strain 150
4.3.1 Normal and Shear Strains 152
4.3.2 Infinitesimal Strains 152
4.3.3 Definition of State of Strain at a Point 153
4.3.4 Volumetric Strain 154
4.3.5 State of Plane Strain 154
4.3.6 Strain Transformations 154
4.4 Constitutive Relations 155
4.4.1 General Form of Constitutive Relations 156
4.4.2 Insight Into the Constitutive Matrices 156
4.4.3 General Classes of Material Idealizations 157
4.4.4 Elastic Material Idealizations 157
4.5 Stresses in Soil Due to Surface Loads 160
4.6 Superposition Principle 160
Example Problems 160

5. Example Problems Involving In Situ Stresses Under Hydrostatic Conditions 205
5.0 General Comments 205
5.1 Surface Tension 205
5.1.1 Surface Tension Phenomena 206
5.2 Capillary Phenomena in Tubes 206
5.3 Capillary Phenomena in Soils 209
5.4 In Situ Stresses in Soils Under Hydrostatic Conditions 211
5.4.1 Total Stress 211

5.4.2 Pore Fluid Pressure 212
5.4.3 Effective (Intergranular) Stress 212
5.5 Relationship Between Horizontal and Vertical Stresses 213
Example Problems 214

6. Example Problems Involving One-Dimensional Fluid Flow in Soils 243
6.0 General Comments 243
6.1 Conservation of Mass 244
6.2 Bernoulli's Energy Equation 245
6.3 Head Loss 247
6.4 Hydraulic Gradient 247
6.5 Seepage Velocity 247
6.6 Darcy's Law 250
6.7 Experimental Determination of Permeability 252
6.7.1 Constant-Head Permeability Test 253
6.7.2 Falling-Head Permeability Test 254
6.8 Hydrostatic Conditions Compared to Upward and Downward Seepage 255
6.8.1 No Seepage (Hydrostatic Conditions) 255
6.8.2 Downward Seepage 257
6.8.3 Upward Seepage 258
6.9 Seepage Forces 260
6.10 Critical Hydraulic Gradient for Upward Seepage 261
6.11 One-Dimensional Seepage Through Anisotropic Soil Strata 262
6.11.1 Equivalent Horizontal Permeability 262
6.11.2 Equivalent Vertical Permeability 263
Example Problems 265

7. Example Problems Involving Two-Dimensional Fluid Flow in Soils 315
7.0 General Comments 315
7.1 Basic Assumptions 316
7.2 Governing Equation 317
7.3 Boundary Conditions 317
7.4 Solution of the Governing Equation 317
7.5 Flow Nets 318
7.6 Rate of Flow Through Flow Nets 319
Example Problems 321

8. Example Problems Related to Compressibility and Settlement of Soils 331
8.0 General Comments 331
8.1 Deformation 331
8.2 Compressibility of Soils 332
8.3 Settlement 332

8.3.1. Immediate Settlement 333
8.3.2. Primary Consolidation Settlement 333
8.3.3. Secondary Consolidation Settlement 334
8.4 Quantifying Soil Compressibility 334
8.5 Preconsolidation Pressure 339
8.6 Coefficient of Compressibility 340
8.7 Ultimate Primary Consolidation Settlement 341
8.8 Coefficient of Volume Compressibility, Modified Compression, and Swell Indices 342
Example Problems 344

9. Example Problems Related to Time Rate of Consolidation 377
9.0 General Comments 377
9.1 Fundamental Definitions 377
9.2 Terzaghi's One-Dimensional Consolidation Theory 377
9.2.1 Governing Differential Equation 379
9.2.2 Separation of Variables Solution 381
9.2.3 Local Degree of Consolidation 381
9.2.4 Average Degree of Consolidation 382
Example Problems 384

10. Example Problems Related to Shear Strength of Soils 419
10.0 General Comments 419
10.1 Shear Strength of Soils 419
10.2 Factors Controlling Shear Strength of Soils 419
10.3 Volume Change Characteristics 420
10.4 Importance of Shear Strength of Geomaterials 420
10.5 Mohr's Failure Criterion 420
10.6 Mohr—Coulomb Failure Criterion 422
10.6.1 Obliquity Relations 424
Example Problems 428
