Introduction	9
1. Logistics service centers and city logistics issues	17
Introduction	17
1.1. Individual aspects of the logistics service center	21
1.1.1. Overview of logistics service centers in Germany	27
1.1.2. Overview of logistics service centers in the Czech Republic	28
1.1.3. Overview of logistics service centers in the Slovak Republic	30
1.1.4. Overview of logistics service centers in Hungary	31
1.1.5. Overview of logistics service centers in Poland	33
1.2. Individual aspects of the city logistics concept	34
1.2.1. Trends affecting city logistics development and processes	37
1.2.2. City logistics approaches	39
2. Use of Operations Research methods to place logistics service centers - literature review	43
Introduction	43
2.1. Overview of the relevant methods - location of the logistics service centers	48
2.1.1. Classical hub location-allocation models	49
2.1.2. Other warehouse location problems	54
2.2. Application of the specific methods for determining the weights of criteria	58
2.2.1. Method of equal weights	58
2.2.2. Entropy method	58
2.2.3. Method of ranking	58
2.2.4. Fuller triangle method	59
2.2.5. Scoring method	60
2.2.6. Saaty method	60
2.3. Application of the specific methods in terms of multi-criteria evaluation of variants	62
2.3.1. Simple method of ranking	62
2.3.2. Lexicographical method	62
2.3.3. Permutation method	62
2.3.4. ORESTE method	62
2.3.5. TOPSIS method	63
2.3.6. WSA method	64
2.3.7. AHP method	65
2.4. Evaluation of suitability of individual methods for their application within a given issue	66

3. Use of Operations Research methods for distribution tasks - literature review	69
Introduction	69
3.1. Overview of the relevant methods - distribution tasks	73
3.1.1. Transport networks	73
3.1.2. Graph theory	74
3.1.3. Distribution tasks	75
3.1.4. Vehicle routing problem	76
3.2. Application of Greedy algorithm	82
3.3. Application of the Nearest Neighbor Algorithm	84
3.4. Application of the Least cost Method	85
3.5. Application of the Vogel Approximation Method	86
3.6. Application of the Hungarian method	87
3.7. Application of Little Algorithm	88
3.8. Application of the Clarke-Wright method	90
3.9. Application of the Mayer method	92
3.10. Evaluation of suitability of individual methods for their application within a given issue	93
4. Model designs - location of the logistics service centers	95
4.1. Draft model of logistics service center location by applying the WSA method	95
4.1.1. Identifying a set of variants	96
4.1.2. Establishing a set of criteria	96
4.1.3. Determining the weights of criteria	97
4.1.4. Selecting the most suitable variant using the WSA method	99
4.2. Draft model of logistics service center location by applying the AHP method	103
4.3. Draft model of logistics service center location by applying the TOPSIS method	108
4.4. Discussion of partial results - location of the logistics service centers	110
5. Model designs - distribution tasks	112
5.1. Draft model of delivery routes when applying Greedy algorithm	113
5.1.1. Model of cargo delivery to customers without initial distance optimization	115
5.1.2. Model of cargo delivery to customers with initial distance optimization using Greedy algorithm	117
5.2. Draft model of delivery routes when applying the Clarke-Wright method	123
5.2.1. Model of cargo delivery to customers for the original state	124
5.2.2. Model of optimized cargo delivery to customers using the Clarke-Wright method	129
5.3. Draft model of delivery routes when applying the Mayer method	138
5.3.1. Model of cargo delivery to customers for the original state	138

5.3.2. Model of optimized cargo delivery to customers using the Mayer method	139
5.3.3. Determining the sequence of supplies using the Nearest Neighbor algorithm	145
5.4. Discussion of partial results - distribution tasks	154
6. Final evaluation of the results obtained and discussion	157
6.1. Evaluation of the draft methodology for placing the logistics service centers	158
6.2. Evaluation of the draft models of delivery routes (distribution tasks)	159
6.2.1. Assessment of the restrictive conditions	159
6.2.2. Assessment of the optimization criterion	160
6.2.3. Assessment of the vehicle capacity utilization	162
6.3. Evaluation of the established assumptions	163
6.4. The contributions of the monograph	164
Conclusions	167
Bibliography	171
List of abbreviations	193
Summary	195
Annexes	197
Annex 1. Breakdown of logistics service centers	197
Annex 2. Input distance matrix D (distances traveled among centers in km)	199
Annex 3. Input time matrix (travel time among individual centers in min)	200
Annex 4. Matrix of preferential coefficients Z (for the Clarke-Wright method)	201
Annex 5. The rate table for the Mayer method (distances traveled among centers in km)	202
Annex 6. The final rate table for the Mayer method after designing the delivery routes	203
