<b>Foreword</b>	<b>7</b>
<b>List of abbreviations</b>	<b>10</b>
<b>Water management in Poland in conditions of development and climate change</b>	
1. Water resources	15
1.1. Rivers and lakes	16
1.1.1. Rivers and their basins	19
1.1.2. Hydrographic network structure	25
1.1.3. Lakes	26
1.1.4. Surface water bodies	28
1.1.5. Supply and surface runoff	29
1.1.6. The use of surface water and related threats to its status	30
1.2. Artificial water reservoirs	34
1.2.1. Main storage reservoirs	34
1.2.2. Reservoir retention functionality	37
1.2.3. Small storage reservoirs	40
1.2.4. Concluding comments	41
1.3. Groundwater	42
1.3.1. Geological structures and water-bearing media	42
1.3.2. Exploitable groundwater resources	44
1.3.3. State of groundwater resources	47
2. Organisation and approach to water management in Poland	50
2.1. Institutional arrangements of water management	50
2.2. Financing water management in Poland	56
2.3. Water management in river basins	62
2.3.1. Planning	65
2.3.2. Monitoring and assessment of the status of the water resources	70
2.3.3. Structure of the surface water monitoring network	71
2.3.4. Structure of the groundwater monitoring network	72
3. Impact of development and climate changes on water resources	74
3.1. The level of climate change and the assessment of its impact on surface water dynamics in Poland	74
3.2. The impact of development pressures on the structure and discharge regime of water	82
3.3. An approach to climate change adaptation in urban areas	87
3.4. Conclusion	89
4. Selected research problems in the upper Vistula catchment area	92

4.1. General characteristics of the catchment area	92
4.2. The role of water resources in social and economic development, in accordance with the principles of sustainable development	96
4.3. Assessment of the status of water management in relation to the water resources of the basin	97
4.3.1. Surface water resources	97
4.3.2. Surface water retention status	100
4.3.3. Groundwater resources	102
4.3.4. Mineral groundwater used in spa therapy	103
4.3.5. Water resources quality	104
4.4. Flood hazard problems and the effectiveness of the flood protection system in the upper Vistula catchment area	105
4.4.1. The existing flood protection system in the Upper Vistula catchment area	105
4.4.2. Flood hazard and the effectiveness of the flood protection system in 2010	110
4.4.2.1. Precipitation scenarios and flood characteristics	110
4.4.2.2. Passage of surge waves in Cracow and their consequences	113
4.4.2.3. Passage of surge waves in Sandomierz and their consequences	116
4.4.3. Effects of the 2010 flood reduction by storage reservoirs	118
4.4.4. Summary	120

## **Water management in Ukraine in conditions of development and climate change**

1. Water resources	123
1.1. Rivers (area, river basin, discharges, levels, water quality)	123
1.2. Lakes/reservoirs (area, capacity, levels, functions, water quality)	149
1.3. Groundwater (capacity, levels, water quality)	155
1.4. Water resources availability (water availability)	158
1.5. Precipitation (distribution by territory)	162
2. Organisation of water management	165
2.1. Governmental organisation of water management	165
2.2. River basin water management	169
2.3. Integrated water resources management	171
2.4. Monitoring and assessment state of water resources	173
3. The impact of development on water resources	179
4. Climate changes	192
5. Description of common problems under pressure of development and climate changes	203

## **Summary 207**

## **Bibliography 209**
